Computer methods in applied mechanics and engineering

Contents Volume 127

Volume 127, Nos. 1–4, November 1995

On limit analysis of discs by a rigid finite element method
E. Pankiewicz 1

Micromechanics of granular media. Part I: Generation of overall constitutive equation for assemblies of circular disks
R.I. Borja and J.R. Wren 13

On the numerical solution of equilibrium problems for elastic solids with bounded tensile strength
M. Lucchesi, C. Padovani and G. Pasquinelli 37

Computerized design and generation of double circular-arc helical gears with low transmission errors
F.L. Litvin and J. Lu 57

Third-order upwind finite element computation of the incompressible Navier–Stokes equations. Part I. Computation of flow around rectangular cylinders
N. Kondo and S. Yamada 87

Third-order upwind finite element computation of the incompressible Navier–Stokes equations. Part II. Aerodynamic characteristics of a rectangular cylinder with an angle of attack
N. Kondo and S. Yamada 99

Dynamic stability of spinning pre-twisted beams subject to axial pulsating loads
H.P. Lee 115

Further results for enhanced strain methods with isoparametric elements
K. Arunakirinathar and B.D. Reddy 127

A Ritz vibration analysis of doubly-curved rectangular shallow shells using a refined first-order theory
K.M. Liew and C.W. Lim 145

A viscohyperelastic finite element model for rubber
A.R. Johnson, C.J. Quigley and C.E. Freese 163

An operator splitting algorithm for coupled one-dimensional advection–diffusion–reaction equations
L.A. Khan and P.L.-F. Liu 181

A block conjugate gradient method applied to linear systems with multiple right-hand angles
Y.T. Feng, D.R.J. Owen and D. Perić 203

An iteration algorithm for kinematic shakedown analysis
Y.-G. Zhang 217

Open loop strategies for the control of a disk rolling on a horizontal plane
Y. Yavin and C. Frangos 227

Formulation and analysis of variational methods for time integration of linear elastodynamics
M. Cannarozzi and M. Mancuso 241

A procedure for efficient generation of solution adapted unstructured grids
D.L. Marcum and N.P. Weatherill 259

An overlapping domain decomposition preconditioner for an anisotropic *h*-adaptive finite element method
W. Rachowicz 269

Upper bound limit analysis using discontinuous velocity fields
S.W. Sloan and P.W. Kleeman 293

A family of quadrilateral hybrid-Trefftz *p*-elements for thick plate analysis
J. Jirousek, A. Wróblewski, Q.H. Qin and X.Q. He 315

Error indicators for mixed finite elements in 2-dimensional linear elasticity
D. Braess, O. Klaas, R. Niekamp, E. Stein and F. Wobschal 345

A direct boundary integral method for the three-dimensional lifting flow
L. Dragoş and A. Dinu 357

On the numerical modelling of convex particle assemblies with friction
M.Ap. Tzaferopoulos 371

Multiscale phenomena: Green's functions, the Dirichlet-to-Neumann formulation, subgrid scale models, bubbles and the origins of stabilized methods
T.J.R. Hughes 387
